

NOT COMPLETED

I have not managed to implement the following feature:

- Pay for all items in the basket using their existing credit. A successful payment must update the stock levels, adjust the credit balance, empty out the shopping basket, and create a customer receipt which needs to be displayed on the screen as below:
"Thank you for the purchase! £[paidAmount] paid and your remaining credit balance is £[remainingCredit]. Your delivery address is [fullAddress]." In this receipt, * [paidAmount] must be replaced by the numeric value of the total payment amount, * [remainingCredit] must be replaced by the numeric value of the customer's (buyer's) remaining credit, and * [fullAddress] must be replaced by the customer's full address.

IT IS ALSO IMPORTANT FOR MY PROGRAM TO WORK THAT YOU ALSO INCLUDE THE "Basket.txt" FILE AS WELL AS THE OTHER TWO COMPULSARY FILES, IT IS JUST AN EMPTY TXT FILE BUT IT IS STILL NEEDED.
